M

Medico Website

Technical handover record for hosting, Firebase services, routes, security, deployment, and administrator access.

Current production version: 10
Prepared: July 28, 2026
Classification: Private — contains administrator credentials

1. Production Website

Public URL	https://medico-health-admin.aa01028622166jb.chatgpt.site
Site name	Medico Health Administration
Site slug	`medico-health-admin`
Access mode	Public
Current deployed version	10
Hosting project ID	`appgprj_6a687624a110819189075d827fa3ff78`
Hosting provider	OpenAI Sites
Runtime and CDN	Cloudflare Workers with static assets
Custom domain	None currently

> Public access means anyone can reach the login page. Firebase Authentication and Firestore security rules continue to protect staff dashboards, administrator features, and medical information.

2. Ports and Local Development

Production HTTPS	Port `443`
Production HTTP	Port `80`, managed by the hosting provider
Local development	`http://localhost:3000`
Local port	`3000`
Local command	`npm run dev`

No custom backend port needs to be opened. Wrangler test ports are temporary and are not production ports.

3. Administrator Account

Email	`admin@medico-health.example`
Password	`adminadmin`
Firebase UID	`hihhC2JMyGbOW54ouZqzdvzWhhj1`

> This password is intentionally included because this is a private handover record. It is weak and should be replaced with a longer unique password before real-world or clinical use.

4. Main Website Routes

`/`	Login and staff registration
`/admin/`	Administrator dashboard
`/admin/patient/?id=NATIONAL_ID`	Administrator patient record
`/doctor/`	Doctor dashboard
`/doctor/patient/?id=NATIONAL_ID`	Doctor patient record
`/hospital/`	Hospital dashboard
`/laboratory/`	Laboratory dashboard
`/pharmacy/`	Pharmacy dashboard
`/file-viewer/?patientId=ID&section=SECTION&recordId=ID`	Medical file viewer

5. Firebase Project

Project ID	`medical-record-system-97a1f`
Authentication domain	`medical-record-system-97a1f.firebaseapp.com`
Firestore database	`(default)`
Realtime Database	`https://medical-record-system-97a1f-default-rtdb.firebaseio.com`
Storage bucket	`medical-record-system-97a1f.firebasestorage.app`
Messaging sender ID	`158318298038`
Firebase web application ID	`1:158318298038:web:c3f9953e2a25674a1ff717`
Measurement ID	`G-XCFMDVERL1`
Firebase Console	https://console.firebase.google.com/project/medical-record-system-97a1f

6. Important Firestore Collections

`admins`	Administrator permissions
`website_users`	Approved staff profiles
`staff_requests`	Pending, approved, and rejected staff registrations
`patients`	Patient profiles and nested medical records
`admin_audit`	Administrator activity history

Patient documents may contain the following nested collections:

- `prescriptions`
- `diagnoses`
- `allergies`
- `surgeries`
- `lab`
- `radiology`
- `fileChunks`

Administrator patient deletion recursively removes the patient and these associated records.

7. Registration and Permissions

Supported staff roles:

- Doctor
- Hospital
- Laboratory
- Pharmacy

New staff accounts register through the website, receive a pending status, and cannot enter their dashboard until an administrator approves the request. The Admin page is protected by the `admins/{uid}` Firestore authorization record; knowing the URL does not bypass security.

8. Firestore Rules

Rules file	`firestore.web.rules`
Firebase configuration	`firebase.web.json`
Live Firebase project	`medical-record-system-97a1f`
Last confirmed live ruleset	`projects/medical-record-system-97a1f/rulesets/7fe1bd5a-7062-46c2-9a62-736e8d773771`

Deploy website Firestore rules with:

```
npm run firebase:deploy:web-rules
```

9. Technology and Architecture

- Next.js 15.5.x
- React 19
- Firebase Authentication
- Cloud Firestore
- Tailwind CSS
- Static Next.js export
- Cloudflare Workers static-assets handler
- OpenAI Sites production hosting
- English and Arabic localization
- LTR and RTL layouts

10. Local Project and Build

Workspace	`C:\graduation_website`
Development command	`npm run dev`
Production build command	`npm run build`

Generated deployment structure:

```
dist/
├── client/             Static website assets
├── server/index.js     Cloudflare Worker handler
├── package.json
└── .openai/hosting.json
```

11. Source and Deployment Version

Current Git commit	`141046e039a6e3a0b47f51c570d142e9cc00e192`
Commit description	Hide duplicate native password reveal control
Current production site version	10

12. Verified Production Status

The following areas were verified successfully after deployment:

- Homepage and login
- Administrator dashboard
- Doctor dashboard

- Hospital dashboard
- Laboratory dashboard
- Pharmacy dashboard
- Patient record
- Medical file viewer

> All verified routes returned HTTP status 200.

Sensitive deployment tokens, source-repository credentials, and private session tokens are intentionally excluded. Store this PDF privately because it contains the administrator password.
